

VARUN NAIR

Aspiring DevOps / Platform Engineer / SRE | Cloud, Linux & Automation

Thane, Mumbai | coderv13@gmail.com | [+91 93216 56622](tel:+919321656622)
github.com/coderv1304 | linkedin.com/in/varun-nair-019574400

PROFILE

MCA student with hands-on foundations in Linux system administration, computer networking, and AWS cloud basics, seeking a DevOps/Platform Engineering/SRE internship with real production exposure. Comfortable scripting in Python and Go, containerizing applications with Docker, and has built a real CI/CD pipeline with GitHub Actions, including linting and security scanning. Eager to join a lean engineering team where I can take ownership, get hands-on with production systems, and learn fast.

TECHNICAL SKILLS

Operating Systems & Networking: Linux/Unix administration and CLI, TCP/IP, DNS, HTTP/HTTPS, SSH, firewall basics

Scripting & Programming: Python, Go, Bash/Shell, SQL, HTML, CSS

Cloud & Infrastructure: AWS (EC2, S3, IAM), Docker & Docker Compose, GitHub Actions CI/CD (lint, SAST, dependency scanning)

Version Control: Git, GitHub

Databases: SQL / relational database fundamentals

Frameworks: Django, Flask

Currently Building: Kubernetes fundamentals; Prometheus/Grafana monitoring; cloud observability concepts

PROJECTS

AI-Driven Network Traffic Anomaly Detection System | *Ongoing (co-developed)*

Python, Flask, scikit-learn, Docker, Docker Compose, GitHub Actions, WebSockets

- Built a full-stack intrusion detection system using a Random Forest classifier trained on the CIC-IDS-2017 benchmark dataset, classifying network flows across 14 attack types with over 99% test accuracy.
- Containerized the application with Docker and Docker Compose, and set up a GitHub Actions CI/CD pipeline with linting, static application security testing (Bandit), and dependency vulnerability scanning.
- Built a real-time monitoring dashboard with Flask-SocketIO, including live traffic charts, a threat gauge, and a Wi-Fi traffic simulator for testing live-like flows end to end.
- Architected clear separation between the training pipeline, inference backend, and frontend, with a roadmap toward Prometheus/Grafana monitoring and Kubernetes deployment.

E-Commerce Online Bakery Management System | *Completed*

Python, Django, HTML, CSS, SQL

- Designed and built a full-stack web application covering product listings, cart, and order management end to end.
- Implemented user authentication, an admin dashboard, and database-driven product management using Django ORM — applying core SDLC and system design fundamentals.
- Built a clean, responsive front end for an intuitive shopping experience.

CERTIFICATIONS

- Machine Learning Foundations Training Badge — AWS Academy
- Cybersecurity of Networks: From Scratch to Advanced — Udemy

EDUCATION

Master of Computer Applications (MCA) 2025 – 2027

VESIT (Vivekanand Education Society's Institute of Technology), Mumbai

Current SGPA: 8.29 (1st Semester)
